

PHP developer

Anobii.com, the social network for book lovers, is building a new platform for users to find, buy and engage with ebooks.

We are in the process of building some pretty cool stuff with APIs, HTML5, and native tablet and mobile apps.

We are looking for talented developers to join our API and Web development team based in London to help us make market leading technology that will change the world for book lovers.

Our current web technology stack is based on PHP and Postgres, so those are the core technical skills we are looking for, but we may well be adding to that stack with appropriate other technologies as we build out our platform. You tell us.

Skills & Requirements

- Experience with large-scale web application development
- Experience of OO PHP and PHP frameworks
- Unit test technology, especially PHPUnit/SimpleTest
- Memcache
- REST API-driven web architectures
- Javascript (including JQuery and JSON)
- HTML/CSS
- Relational databases (we currently use Postgres)
- Experience of formal agile development practices
- Comfortable in a small, intense start-up environment
- Based in London, or commutable to London.

Nice to haves

- Track record of open source contributions
- Programming experience in languages other than PHP
- Active in developer communities
- Publishing industry experience

The role is based at our offices in Clerkenwell, Central London.
